

Agenda - Week 8

Settling matters

Location: PC Hall 1 - Cubicle 2

Datum: 4th April 2023

Time: 16:45 - 17:30

Attendees:

- Ísak Jónsson (Chairman)
- Martin Angelov
- Max Derbenwick (Minute-taker)
- Cristiana Cotoi
- Miia Zhang
- Satsuki Udagawa

Agenda-items

15:15 - 15:17 **Opening by chair (Approval of agenda & minutes)**

15:17 - 15:27 **Demo the application for TA, TA takes over**

- Application almost completed despite bug fixes and merging tags

15:27 - 15:32 **Discuss application with TA, feedback on what is needed for the final sprint**

- Testing coverage dropped after adding services, test locally to get a full report
- Application grading:
 - Different TAs will look at different parts of the application (not our TA)
 - Task and planning, code contribution, heuristic evaluation, testing
 - : Teamwork portion, coding portion, heuristic portion
- Dependency injection and resolving static fields: supposedly not a problem (but perhaps add comments)
- Ideally, most MRs contain code and tests (good vs sufficient), so we probably include tests in our remaining MRs
- Do not push code on Tuesday due to GitLab traffic

15:32 - 15:35

Feedback, questions, summarize action points, and closure.

- Refactor heuristic usability evaluation soon as a team (date TBD)
- Meet to film product pitch ideally this week (so we can edit over the weekend)
- Teamwork self reflection: make sure to mention content from the teamwork lecture - all criteria must be passed
 - Abstract does not count towards word count
